

藥物	嚴重性	證據等級	內容
Colchicine - Ketoconazole	Contraindicated	Excellent	Increased colchicine plasma concentrations and increased risk of toxicity.
Terfenadine - Ketoconazole	Contraindicated	Excellent	May result in cardiotoxicity (QT prolongation , torsades de pointes, cardiac arrest).
Droneodaron - Ketoconazole	Contraindicated	Excellent	May result in increased dronedarone plasma concentrations.
Domperidone - Ketoconazole	Contraindicated	Excellent	May result in increased domperidone plasma concentrations and increased risk of QT interval prolongation .
Triazolam - Ketoconazole	Contraindicated	Excellent	May result in increased triazolam concentrations and potential triazolam toxicity (excessive sedation and prolonged hypnotic effects).
Alprazolam - Ketoconazole	Contraindicated	Excellent	Result in increased alprazolam concentrations and potential alprazolam toxicity (excessive sedation and prolonged hypnotic effects).
Ergot derivatives - Ketoconazole	Contraindicated	Good	May result in an increased risk of ergotism (nausea, vomiting, vasospastic ischemia).
Irinotecan - Ketoconazole	Contraindicated	Good	May result in increased serum irinotecan concentrations.
Silodosin - Ketoconazole	Contraindicated	Good	May result in increased silodosin exposure.
Ketoconazole - Simvastatin	Contraindicated	Good	May result in an increased risk of myopathy or rhabdomyolysis.
Eplerenone - Ketoconazole	Contraindicated	Good	May result in increased eplerenone plasma concentrations and increased risk of eplerenone side effects.
Nimodipine - Ketoconazole	Contraindicated	Fair	May result in increased serum nimodipine concentrations.
